

# LOW

With the Active Adult movement geared toward downsizing to dream retirement homes, low maintenance products become the centerpiece for a worry-free lifestyle.

# MAINTENANCE

## ▲ Correcting decking

Active Adult homeowners looking to maximize their decking options and minimizing household maintenance can look no further than CorrectDeck CX by Correct Building Products. Their mastery of low maintenance housing options brings forth a composite deck that resists scratches and bending by utilizing Polypropylene, the strongest plastic used for decking material. CorrectDeck CX offers incredibly low maintenance, allowing Active Adult homeowners the option to simply wash their decks off with a hose. Their Microban protection prevents the growth of mold and mildew, as well as preventing fading or grease stains. The various woodgrain finishes never wear out and also never need sanding, staining or painting. For more information, visit [www.correctdeck.com](http://www.correctdeck.com).

## ◀ The “living” finish

When the perfect finish is scratched, dented or chipped, the has-been is looked upon with disapproving eyes until it is eventually replaced. But Craft-Art Wood Countertops believes that since life is inevitable, materials that embrace the “living” finishes is what will stand the true tests of time. Using a combination of copper sinks and wood countertops — both of which will slowly take on unique characteristics — the room gives off a unique warmth that comes from years of use. With a wood that has a naturally occurring weather-resistant quality and antibacterial acids in copper, the “worn-in” look doesn’t mean it is worn out. For more information, visit [www.craft-art.com](http://www.craft-art.com) or [www.cifalusa.com](http://www.cifalusa.com).

## ▲ Breathability for the home

Mold and mildew problems are now easily fixable with Delta’s DELTA-DRY impermeable membrane, tackling the issue of mold and mildew. DELTA-DRY is used in addition to building paper, utilizing an air-gap on the interior and exterior sides of the membrane in conjunction with a unique dimple and groove design to accommodate water vapor, allowing moisture to escape and minimizing condensation behind exterior cladding. The result is a simple way to ensure a low maintenance home that is free of mold or mildew damage. It also acts as insulation, keeping the heat inside during winter and outside during summer. For more information, visit [www.deltadry.com](http://www.deltadry.com).
